ENVIRONMENTAL PRODUCT DECLARATION

as per ISO 14025 and EN 15804

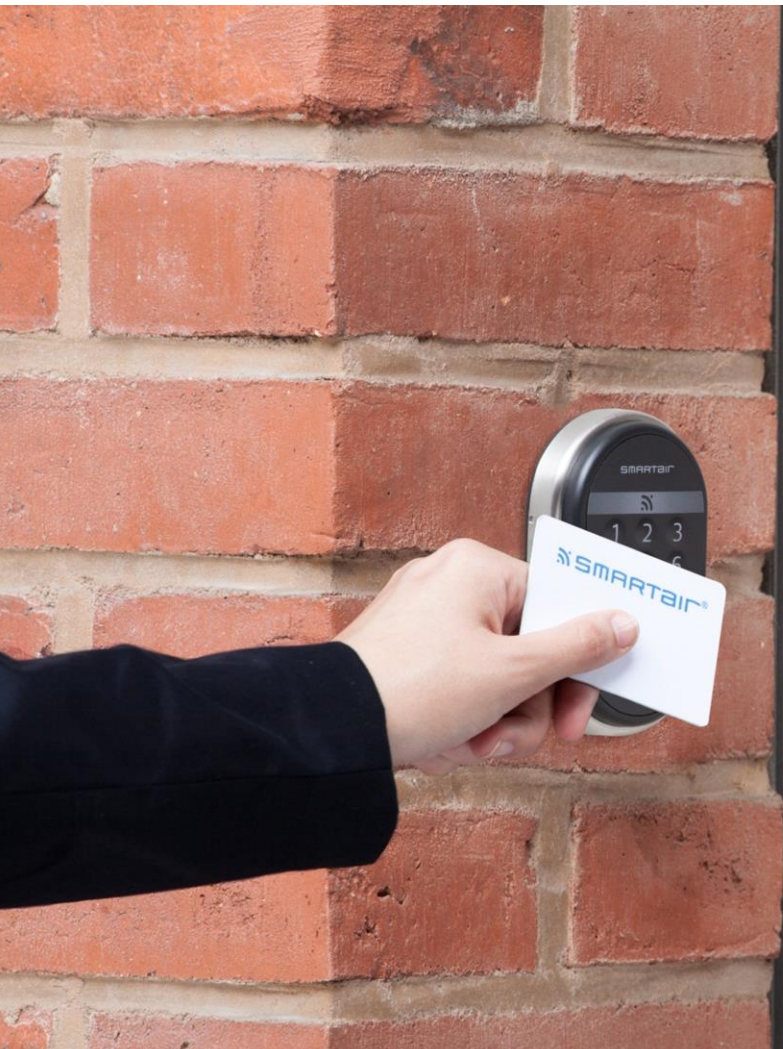
Owner of the Declaration	**ASSA ABLOY**
Programme holder	Institut Bauen und Umwelt e.V. (IBU)
Publisher	Institut Bauen und Umwelt e.V. (IBU)
Declaration number	EPD-ASA-20150166-IBA1-EN
Issue date	10.06.2015
Valid to	09.06.2020

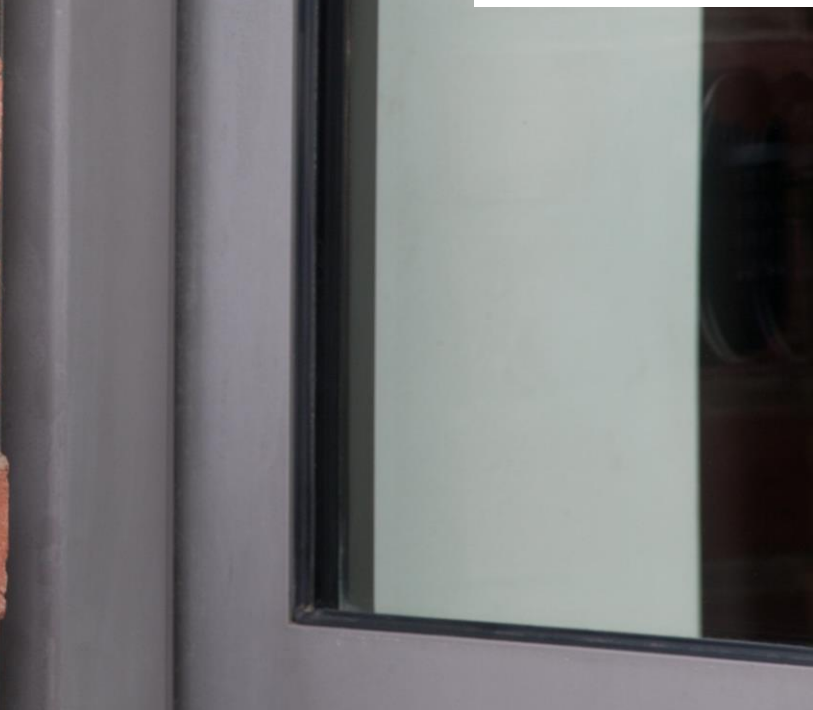
Access control systems – SMARTair Wall Reader

ASSA AB

Institut Bauen und Umwelt e.V.

www.bau-umwelt.com / https://epd-online.com





1. General Information

ASSA ABLOY

Programme holder

IBU - Institut Bauen und Umwelt e.V.
Panoramastr. 1
10178 Berlin
Germany

Declaration number

EPD-ASA-20150166-IBA1-EN

This Declaration is based on the Product Category Rules:

IBU: PCR Electronic Access Control Systems, 11-2013
(PCR tested and approved by the independent expert committee (SVA))

Issue date

10.06.2015

Valid to

09.06.2020

Prof. Dr.-Ing. Horst J. Bossenmayer
(President of Institut Bauen und Umwelt e.V.)

Dr.-Ing. Burkhart Lehmann
(Managing Director IBU)

SMARTair Wall Reader

Owner of the Declaration

ASSA AB
P.O. Box 371
SE-631 05 Eskilstuna
Sweden

Declared product / Declared unit

This Declaration represents 1 piece of SMARTair Wall Reader.

Scope:

This declaration and its LCA study are relevant to SMARTair Wall Reader

Main primary manufacturing processes are made by external suppliers and the final manufacturing processes and assembly occur at our manufacturing factory in Irun, Spain. The owner of the declaration shall be liable for the underlying information and evidence; the IBU shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Verification

The CEN Standard EN 15804 serves as the core PCR
Independent verification of the declaration and data according to ISO 14025
☐ internally ☒ externally

Dr. Wolfram Trinius
(Independent verifier appointed by SVA)

2. Product

2.1 Product description

The SMARTair Wall Reader is a device that communicates with a personalized credential via RF technology. It collects identity information from the credential and passes it along to a secured control unit. The control unit then grants or denies access to the credential holder. It is capable of communications using a high frequency RF signal and able to communicate with several credential formats.
Supported credential formats:
• iCLASS SE (Cards/Tags/Fobs)
• SE for DESFiire EV1 (Cards)
• SE for MIFARE Classic (Cards/Tags/Fobs)
• NFC compatible
• ISO/IEC 15693

2.2 Application

The SMARTair Wall Reader is suitable for indoor and outdoor use, where ID authentication is required. Common applications include: Commercial buildings, Industrial buildings, Government buildings, Military installations, Education establishments, Healthcare buildings.

2.3 Technical Data

The table presents the technical properties of SMARTair Wall Reader:

Technical data

Name	Value	Unit
Power supply	100-240	V
Current Requirements	1	A
Operating Temperature	-10 to 80	°C
Operating Humidity	up to 85	%
Power consumption (standby)	10	mW
Power consumption NSC - w/IPM	1.4	W
Peak Power Draw (During read)	1.2	W

2.4 Placing on the market / Application rules

EMC Directive 2004/108/CE
LV Directive 2006/95/CE
R&TTE Directive 1999/05/CE
ROHS Directive 2011/65/CE
IP 54 Certified

2.5 Delivery status

Each Wall Reader unit is delivered individually packaged with mounting hardware, and gasket. Packing dimensions: 220mm x 300mm x 50mm.

2.6 Base materials / Ancillary materials

The average composition of the SMARTair Wall Reader is as following:

Component	Percentage in mass (%)
Brass	0.31
Plastics	20.24
Steel	56.97
Electronic	11.54
Electro mechanics	10.94
Total	**100.0**

2.7 Manufacture

The SMARTair Wall Reader is assembled at the production facility in Irun. The electronics are produced in China and the mechanics in Spain. The components come from processes like stamped steel, turning, zinc and steel casting.
The factory in Irun has a certification of Quality Management system in accordance with /ISO 9001:1994/.

2.8 Environment and health during manufacturing

ASSA ABLOY is committed to producing and distributing door opening solutions with minimal environmental impact, where health & safety is the primary focus for all employees and associates.
• Environmental operations, GHG, energy, water, waste, VOC, surface treatment and H&S are being routinely monitored. Inspections, audits, and reviews are conducted periodically to ensure that applicable standards are met and environmental management program effectiveness is evaluated.
• Code of Conduct covers human rights, labor practices and decent work. Management of ASSA ABLOY is aware of their environmental roles and responsibilities, providing appropriate training, supporting accountability and recognizing outstanding performance.
• The factory in Irun has certification of Environmental Management to /ISO 14001:1999/.
• Any waste metals during machining are separated and recycled. The waste from the water-based painting process is delivered to waste treatment plant.

2.9 Product processing/Installation

SMARTair Wall Reader is installed by trained product integrators or by the product end user. Installation instructions are included with each unit.

2.10 Packaging

The device is packed in a carton box with foam spacers to avoid damage. Also included in the packaging are paper installation instructions, the gasket, and a plastic bag containing the connectors and mounting hardware. Packaging materials shall be collected separately for recycling.

Material	Value (%)
Cardboard/paper	100
Total	**100.0**

2.11 Condition of use

No auxiliary or consumable materials are incurred for maintenance and usage of the reader. Repairs or replacement are not usually necessary. No cleaning efforts need to be taken into consideration.

2.12 Environment and health during use

There are no interactions between products, the environment and health.

2.13 Reference service life

15 years depending on cycle frequency.

2.14 Extraordinary effects

Water

Contain no substances that have any impact on water in case of flood. Electric operation of the device will be influenced negative.

Mechanical destruction

No danger to the environment can be anticipated during mechanical destruction.

2.15 Re-use phase

The product is possible to re-use during the reference service life and be moved to one door to another.
Waste codes according to European Waste Catalogue /EWC/ and Hazardous Waste List -Valid from 1 January 2002;
/EWC/ 16 02 13* discarded equipment containing hazardous components other than those mentioned in 16 02 09 to 16 02 12
/EWC/ 17 02 03 plastic
/EWC/ 17 04 01 copper, bronze, brass
/EWC/ 17 04 05 iron and steel
/EWC/ 17 04 11 Cables with the exception of those outlined in 17 04 10
Disposal of the product is subject to the /WEEE/ Directive within Europe, Directive 2012/19/EU.

2.16 Disposal

No disposal is foreseen for the product nor for the corresponding packaging.

2.17 Further information

More information on ASSA AB SMARTair Wall Reader is available from:

ASSA AB
P.O. Box 371

3. LCA: Calculation rules

3.1 Declared Unit

The declaration refers to the functional unit of 1 piece of SMARTair Wall Reader as specified in Part B requirements on the EPD for Electronic Access Control Systems /IBU PCR Part B/.

Declared unit

Name	Value	Unit
Declared unit	1	piece of SMARTair Wall Reader
Mass of product (without packaging)	0.621	kg
Conversion factor to 1 kg	1.61	-

3.2 System boundary

Type of the EPD: cradle to gate - with options.
The following life cycle phases were considered for Reader:
A1-A3 Production stage:

- A1 – Raw material extraction and processing
- A2 – Transport to the manufacturer and
- A3 – Manufacturing

Construction stage:

- A4 - Transport from the gate to the site
- A5 – Packaging waste processing

Use stage related to the operation of the building includes:

- B6 – Operational energy use (Energy consumption for lock operation)

End-of-life stage:

- C2 – Transport to waste processing,
- C3 – Waste processing for recycling and
- C4 – Disposal (landfill)

These information modules include provision and transport of all materials, products, as well as energy and water provisions, waste processing up to the end-of-waste state or disposal of final residues.

Module D:

- Declaration of all benefits or recycling potential from EoL and A5.

3.3 Estimates and assumptions

Use phase:
For the use phase, it is assumed that the lock is used in the European Union, thus an European electricity grid mix is considered within this stage.

EoL:
In the End-of-Life phase, for all the material which can be recycled, a recycling scenario with 100% collection rate was assumed.

3.4 Cut-off criteria

In the assessment, all available data from the production process are considered, i.e. all raw materials used, auxiliary materials (e.g. lubricants), thermal energy consumption and electric power consumption - including material and energy flows contributing less than 1% of mass or energy (if available). In case a specific flow contributing less than 1% in mass or energy is not available, worst case assumption proxies are selected to represent the respective environmental impacts.

Impacts relating to the production of machines and facilities required during production are out of the scope of this assessment.

3.5 Background data

For life cycle modeling of the considered products, the GaBi 6 Software System for Life Cycle Engineering, developed by PE INTERNATIONAL AG, is used /GaBi 6 2013/. The GaBi-database contains consistent and documented datasets which are documented in the online
GaBi-documentation /GaBi 6 2013D/.
To ensure comparability of results in the LCA, the basic data of GaBi database were used for energy, transportation and auxiliary materials.

3.6 Data quality

The requirements for data quality and background data correspond to the specifications of the /IBU PCR Part A/.
PE INTERNATIONAL performed a variety of tests and checks during the entire project to ensure high quality of the completed project. This obviously includes an extensive review of project-specific LCA models as well as the background data used.
The technological background of the collected data reflects the physical reality of the declared products. The datasets are complete and conform to the system boundaries and the criteria for the exclusion of inputs and outputs.
All relevant background datasets are taken from the GaBi 6 software database. The last revision of the used background data has taken place not longer than 10 years ago.

3.7 Period under review

The period under review is 2012/13 (12 month average).

3.8 Allocation

Regarding incineration, the software model for the waste incineration plant (WIP) is adapted according to the material composition and heating value of the combusted material. Following specific life cycle inventories for the WIP are considered:

- Waste incineration of plastic
- Waste incineration of paper
- Waste incineration of electronic scraps (PWB)

Regarding the recycling material of metals, the metal parts in the EoL are declared as end-of-waste status. Thus, these materials are considered in module D. Specific information on allocation within the background data is given in the GaBi dataset documentation.

3.9 Comparability

Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account.

4. LCA: Scenarios and additional technical information

The following technical information is a basis for the declared modules or can be used for developing specific scenarios in the context of a building assessment if modules are not declared (MND).

Transport to the building site (A4)

Name	Value	Unit
Truck transport		
Litres of fuel diesel with maximum load (27 t payload)	39.4	l/100 km
Transport distance truck	500	km
Capacity utilization (incl. empty runs) of truck	85	%

Installation into the building (A5)

Name	Value	Unit
Output substances following waste treatment on site Packaging (paper and plastic)	0.0022	kg

Reference service life

Name	Value	Unit
Reference service life	15	a

Operational energy use (B6)

Name	Value	Unit
Electricity consumption	2.617	kWh
Days per year in use	365	d
Hours per day in different modes	24	h
Power consumption on mode	1.2	W
Power consumption stand-by mode	0.01	W

End of life (C1-C4)

Name	Value	Unit
Collected separately Brass, Plastic Parts, Steel, Electronic, Electro mechanics	0.621	kg
Recycling Brass	0.002	kg
Reuse plastic parts	0.126	kg
Recycling Steel	0.353	kg
Recycling metals from electronic	0.14	kg

Reuse, recovery and/or recycling potentials (D), relevant scenario information

Name	Value	Unit
Collected separately waste Card reader (including packaging)	0.624	kg
Recycling Brass	0.3	%
Reuse Plastic parts	20.18	%
Recycling Steel	56.77	%
Recycling/Reuse Electronic	11.5	%
Recycling/Reuse Electro mechanics	10.9	%
Reuse Paper packaging	0.35	%

5. LCA: Results

Results shown below were calculated using CML 2000 – Apr. 2013 Methodology

DESCRIPTION OF THE SYSTEM BOUNDARY (X = INCLUDED IN LCA; MND = MODULE NOT DECLARED)

PRODUCT STAGE			CONSTRUCTION PROCESS STAGE		USE STAGE							END OF LIFE STAGE				BENEFITS AND LOADS BEYOND THE SYSTEM BOUNDARYS
Raw material supply	Transport	Manufacturing	Transport from the gate to the site	Assembly	Use	Maintenance	Repair	Replacement[1)]	Refurbishment[1)]	Operational energy use	Operational water use	De-construction demolition	Transport	Waste processing	Disposal	Reuse-Recovery-Recycling-potential

6. LCA: Interpretation

This chapter contains an interpretation of the Life Cycle Impact Assessment categories. Stated percentages in the whole interpretation are related to the overall life cycle, excluding credits (module D).

The production phase (modules A1-A3) contributes between 77% and 100% to the overall results for all the environmental impact assessment categories hereby considered, except for the depletion potential of the stratospheric ozone layer (ODP), for which the contribution from the production phase accounts for app.77%. Steel, plastics and electronic parts account in total with app. 87% to the overall mass of the product, therefore, the impacts are in line with the mass composition of the product. The environmental impacts for the transport (A2) have a negligible impact within this stage.

To reflect the use phase (module B6), the energy consumption was included and it has a major contribution for all the impact assessment categories considered - between 0.1% and 9%, with the exception of ODP (23%). In calculating the ozone depletion potential, the anthropogenically released halogenated hydrocarbons, which can destroy many ozone molecules, are recorded first, therefore, as expected, the impact is higher during the use phase of the product (B6). This is a result of long operation hours in on mode every day in a year.

In the end-of-life phase, there are loads and benefits (module D, negative values) considered. The benefits are considered beyond the system boundaries and are declared for the recycling potential of the metals and for the credits from the incineration process (energy substitution).

7. Requisite evidence

Not applicable in this EPD.
