

Free Spinning Locker Hasp

Area of usage

ASSA ABLOY Locker Hasp for use on lockers, cabinets, boxes etc.

Performance

ASSA ABLOY Locker Hasp are available in two lengths. The shorter version is suitable for doors with thickness up to 15 mm and the long version for doors with thickness up to 22 mm.

Housing and core of zinc plated steel. Large selection of 3 mm thick catches. The Locker hasp has the same hole footprint as ASSA ABLOY Cylinder 10450/10460.

Function

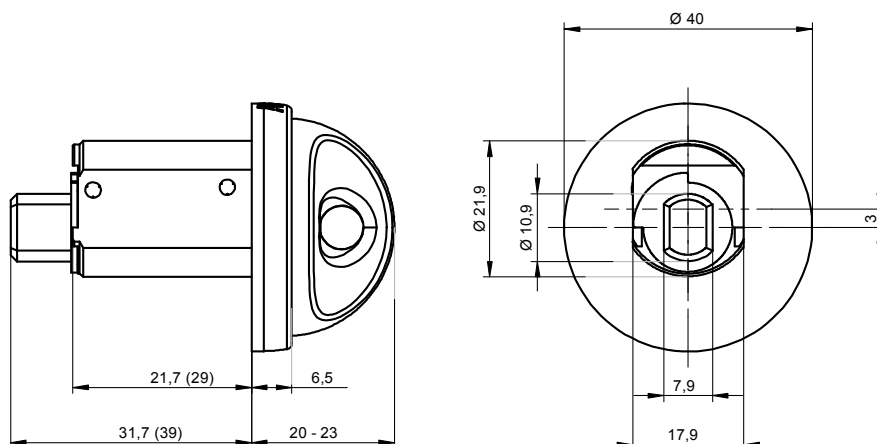

In the locked position the handle is free spinning and the catch is locked from rotating. This means that it is not possible to apply any torque into the lock.

In the open position the handle can be pressed in and the catch can then be turned 90 degrees, thus allowing for opening of the locker.

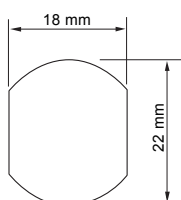

For optimal function we recommend pad locks that has a shackle with a diameter between 4.5 and 6 mm.
